
Function Transfer

```
pub fn transfer<'info> (  
  ctx: CpiContext<'_, '_, 'info, Transfer<'info>>,  
  lamportes: u64,  
) -> Result<()>
```

Todos!?

- Instruction to Bid -> blind bid.
- Instruction to Store the highest bid and refund the previous highest bid
- Close the auction when it ends and send the nft to highest_bidder at the end of the auction.
- to close bid accounts to let bidders recoup their rent spendings.

Até dia 13

- Instruction to create the auction for the NFT.
- It has to transfer the NFT to pda account.
- One instruction to configure the auction (cannot be called during runtime)
 - reserve price,
 - minimum bid_amount,
 - secret highest_amount,
- To start the auction with the configured parameters,

PROF

Auction

Future endeavours?

- ZPK that the contract knows the highest_bid.
